4. In regards to claims 68, 102, and 112, Mistry discloses the method, wherein: the telephone call is connected to a telephone of the workstation (col. 6 lines 51-54); and

the telephone address is a telephone number of a telephone of the destination (col. 10 lines 16-30).

5. In regards to claims 69, 86, 103, and 113, Mistry discloses the method, wherein: the workstation establishes the communications link with a presently-available one of a plurality of workstations included in the destination (Fig. 1 and telephones 34 and 58).

6. In regards to claims 70, 87, 104, 107, and 114, Mistry discloses the method, wherein: the workstation establishing a data communications link comprises the steps of: the workstation requesting a data address of the destination from a destination selector; the destination selector selecting a data address of the destination from one of a plurality of destination data addresses; the destination selector providing the selected data address to the workstation; and the workstation establishing the communications connection with the selected data address of the destination (col. 5 lines 14-32 and col. 10 lines 5-15).

8. In regards to claims 74, 91, and 115, Mistry discloses the method, further comprising: determining a profile for the telephone call; referencing data in a destination selector to determine an appropriate data address for the data associated with the telephone call; and thereafter establishing the data communications link with the destination (col. 6 lines 51-59).

9. In regards to claims 76, 77, 78, 93, 94, 95, 108, 109, 110, 116, 117, and 118, Mistry discloses the method, wherein the selector comprises a location table containing an ordering of addresses and corresponding call handling applications (col. 4 lines 4-24 and col. 5 lines 14-37).

10. In regards to claims 79 and 96, Mistry discloses the method, wherein in the requesting step, the request to transfer the telephone call is sent to a format suitable for receipt by a computer-telephone interface ("CTI") (CTI server 40 and CTI hardware 44) link to a private brand exchange ("PBX") (PBX 49) (Fig. 1) and wherein the workstation establishing step comprises: identifying a call-handling application associated with the destination (col. 2 lines 47-59); and determining whether the call-handling application is presently active (col. 5 lines 27-32).

11. In regards to claims 80, 82, 97, and 99, Mistry discloses receiving client information from a database (database 54), wherein the client information comprises the data in the transfer request (col. 6 lines 51-59 and col. 7 lines 24-30).

Response to Arguments

12. Applicant's arguments filed 08/08/03 have been fully considered but they are not persuasive. Applicant states that Mistry does not disclose the workstations of the user nor the subscriber requesting the transfer of an existing (already connected) call, and that there is no data communications link between the workstations of the user and subscriber along with data associated when the telephone call is transferred. Examiner respectfully disagrees with this argument. Mistry does disclose the workstations of the

user and the subscriber requesting the transfer of an existing (already connected) call, and that there is data communications link between the workstations of the user and subscriber along with data associated when the telephone call is transferred (col. 5 lines 41-57, col. 6 lines 4-15, and col. 9 lines 1-32). Applicant, further states that Mistry does not disclose the workstation of the called party providing a telephone address of a corresponding telephone to the workstation of the calling party. Examiner respectfully disagrees with this argument. Mistry does disclose the workstation of the called party providing a telephone address of a corresponding telephone to the workstation of the calling party (col. 10 lines 16-30).
